CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV)
CC internal ribosome entry site (IRES) region coding for one or more NS3,
CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations
CC are detailed in the specification. Also included are (1) an expression
CC vector comprising a nucleotide sequence coding for the altered nucleic
CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a
CC recombinant cell human hepatoma cell comprising the altered nucleic acids
CC; (3) a recombinant cell produced by introducing into a human hepatoma
CC cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus)
CC replicon enhanced cell or which containing a functional HCV replicon; (5)
CC an HCV replicon enhanced cells made in the method; and (6) measuring the
CC ability of a compound to affect HCV activity. The HCV replicons and HCV
CC replicon enhanced cells are useful in studying HCV replicons and HCV
CC replicon enhanced cells are useful in studying HCV replicons and HCV
CC replicon enhanced cells are useful in studying HCV replicons and HCV
CC ability of a compound to affect HCV activity. The HCV replicons and HCV
CC replicon enhanced cells are useful in studying HCV replicons and HCV
CC treat HCV mediated diseases such as liver failure, cirrhosis and
CC the control of the invention. Note: The present sequence is an HCV replicon Con 1
CC mutant of the invention. Note: The present sequence is not shown in the
CC appearing as ABK91411 and the information in Claim 9
                                                                                                                                                                       Query Match

```
The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (RBS) region coding for one or more NS3, CC NS5A, or EMCV IRBS mutations, respectively. The location of the mutations CC are detailed in the specification. Also included are (1) an expression CC vector comprising a nucleotide sequence coding for the altered nucleic cd acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma CC; (3) a recombinant cell produced by introducing an HCV (hepatitis C virus) CC replicon enhanced cells made in the method; and (6) measuring the CC ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replicons and CC expression, and HCV and host cell interactions, producing HCV NNA and CC proteins, and providing a system for measuring the ability of a compound to affect HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC mutant of the invention. Note: The present sequence is not shown in the cc specification but was created by the indexer using the HCV sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New Hepatitis C virus (HCV) replicons comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region, useful in studying HCV replication and site of the control of the contro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  De Francesco R,

                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations CC are detailed in the specification. Also included are (1) an expression CC vector comprising a nucleotide sequence coding for the altered nucleic CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a CC recombinant cell human hepatoma cell comprising the altered nucleic acids (2) a recombinant cell produced by introducing into a human hepatoma CC (2) a recombinant cell produced by introducing an HCV replicon; (5) a replicon enhanced cells made in the method; and (6) measuring the CC ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replication and CC proteins, and HCV and host cell interactions, producing HCV RNA and CC proteins, and providing a system for measuring the ability of a compound to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC hepatocellular carcinoma. The present sequence is not shown in the specification but was created by the indexer using the HCV sequence CC appearing as ABES1411 and the information in Claim 9

The invention relates to nucleic acid molecules comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations are detailed in the specification. Also included are (1) an expression vector comprising a nucleotide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) and HCV replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replication and cexpression, and HCV and host cell interactions, producing HCV RNA and providing a system for measuring the ability of a compound to affect HCV activities e.g. to discover drugs which may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABK91432;

New Hepatitis C virus (HCV) replicons comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region, useful in studying HCV replication as

Claim 9; Page 36-39; 69pp; English

The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations CC are detailed in the specification. Also included are (1) an expression CC vector comprising a nucleotide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a CC recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma CC replicon enhanced cell or which containing a functional HCV replicon; (5) CC an HCV replicon enhanced cells made in the method; and (6) measuring the CC ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells made in the method; and (6) measuring the CC replicon enhanced cells made in the method; and (6) measuring the CC expression, and HCV and host cell interactions, producing HCV RNA and CC replicon enhanced cells are useful in studying HCV replication and CC expression, and HCV and host cell interactions, producing HCV RNA and CC to modulate one or more HCV activities e.g. to discover drugs which may create HCV mediated diseases such as liver failure, cirrhosis and cc used as a basis for the adaptive mutations of the invention

The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations CC vector comprising a nucleotide sequence coding for one appression CC vector comprising a nucleotide sequence coding for the altered nucleic CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids (3) a recombinant cell produced by introducing into a human hepatoma CC rell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) CC applicon enhanced cells or which containing a functional HCV replicon; (5) an HCV replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replication and CC virus, and HCV and host cell interactions, producing HCV RNA and CC proteins, and providing a system for measuring the ability of a compound to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC hepatocellular carcinoma. The present sequence is not shown in the specification but was created by the indexer using the HCV sequence CC appearing as ABK91411 and the information in Claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations CC are detailed in the specification. Also included are (1) an expression CC cacide, which is transcriptionally coupled to an exogenous promoter; (2) a CC recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma CC cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) CC replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replication and CC expression, and HCV and host cell interactions, producing HCV RNA and CC proteins, and providing a system for measuring the ability of a compound to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC mutant of the invention. Note: The present sequence is an HCV sequence CC appearing as ABK91411 and the information in Claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches 1661;

The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations care detailed in the specification. Also included are (1) an expression CC vector comprising a nucleotide sequence coding for the altered nucleic cacids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) CC replicon enhanced cells and containing a functional HCV replicon; (5) CC an HCV replicon enhanced cells made in the method; and (6) measuring the cability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replication and CC expression, and HCV and host cell interactions, producing HCV RNA and CC proteins, and providing a system for measuring the ability of a compound to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, citrhosis and CC mutant of the invention. Note: The present sequence is an HCV replicon Con 1 mutant of the invention. Note: The present sequence is not shown in the

                                                                                                                                    S
                                                                                                                                                                                                                                              CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV)

CC NS3A, or EMCV IRES mutations, respectively. The location of the mutations or especification coding for one or more NS3, NS5A, or EMCV IRES mutations, respectively. The location of the mutations or espectively. The location of the mutations or expression code acids, which, is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell nucleic section of the altered nucleic acids, which altered nucleic acids; (4) producing into a human hepatoma cell comprising the altered nucleic acids; (4) producing an HCV (hepatitis C virus) creplicon enhanced cells are useful in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replicons and CC replicon enhanced cells are useful in studying HCV replicons and HCV replicon enhanced cells are useful in studying HCV replicons and HCV conteins, and providing a system for measuring the ability of a compound to more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and compound to modulate one or more HCV activities e.g. to discover drugs which may hepatocellular carcinoma. The present sequence is not shown in the specification but was created by the indexer using the HCV sequence component of the invention. Note: The present sequence is not shown in the appearing as ABK91411 and the information in Claim 9

```
The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations ceretor comprising a nucleotide sequence coding for one or more NS3, CC acids, which is transcriptionally coupled to an expression CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a cc recombinant cell human hepatoma cell comprising the altered nucleic acids (3) a recombinant cell produced by introducing into a human hepatoma CC cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) CC an HCV replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replication and CC expression, and HCV and host cell interactions, producing HCV RNA and CC modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC mutant of the invention. Note: The present sequence is not shown in the cc specification but was created by the indexer using the HCV sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Hepatitis C virus (HCV) replicons comprising altered HCV NS3 or HC NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region, useful in studying HCV replication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 9; Page; 69pp; English
